

JOURNAL OF
THE RADIO RESEARCH LABORATORIES

MARCH, 1954

CONTENTS

VI. INFLUENCE OF THE HORIZONTAL AND VERTICAL MOVEMENTS OF THE IONIZED LAYER ON THE OBSERVED ELECTRON DENSITY VARIATION	63
6.1. Introduction	63
6.2. Horizontal gradient in electron density	63
6.3. Analysis of the electron density variation, the influence of the horizontal and vertical movements of the layer being taken into consideration	64
6.31. Movement of the ionized layer due to winds	65
6.32. Results of the analysis	66
6.4. Comparison with Martyn's theory	67
VII. ON THE LATITUDINAL DISTRIBUTION OF MAXIMUM VALUES OF f_0F_2 IN ITS DIURNAL VARIATION	71
7.1. Object of considering the latitudinal distribution of maximum values of f_0F_2 in its diurnal variation	71
7.2. Method of analysis	72
7.3. Results of the analysis	73
7.4. Discussions of the results obtained	77
VIII. COMPARISON OF THE ELECTRON DENSITY VARIATIONS IN THE F2 REGION AT KOKUBUNJI AND YAMAGAWA DURING THE NIGHT	80
8.1. Object of making a comparison of nocturnal electron density variations observed at two different sites	80
8.2. Method of analysis	80
8.3. Relation between $\frac{d}{dt} \Delta \ln N$ and Δz_m	82
8.4. Relation between $\frac{d}{dt} \Delta \ln N$, ΔN , and $\bar{N} \Delta z_m$	84

8.5. Upper atmospheric temperature above Kokubunji and Yamagawa . . .	85
IX. THEORETICAL CONSIDERATIONS	87
9.1. Summary of the observational facts on the electron disappearance in the F2 layer	87
9.2. Brief survey of the theory of the electron removal in discharge tubes	87
9.3. Fundamental processes	88
9.4. Solution of the equations	92
9.41. Consideration of the case in which recombination is effected through the process reverse to pre-ionization	93
9.42. Consideration of the case in which recombination is dissoci- ative	94
9.5. Discussions on the possibility of actual occurrence of the processes considered in the foregoing sections	97
X. CONCLUSIONS	100
10.1. Summary of this paper	100
10.2. Further studies to be done	104
10.21. Analysis of observational data covering wider ranges of space and time	104
10.22. Law of dependency of the attachment coefficient on tempera- ture	105
10.23. Consideration of temperature gradient in the upper atmos- phere	105
10.24. Explanation of the large change in temperature	105
10.25. Explanation of the fact that electron density does not much depend on pressure	105
10.26. Explanation of the seasonal variation in the attachment coef- ficient	105
10.27. Detailed study of the charge transfer reactions (9.5 a and b).	106
10.28. Absolute intensity of the Vegard-Kaplan bands and the occur- rence probabilities of the processes concerned	106
10.29. Mechanism by which the number of excited nitrogen mol- ecules is approximately kept constant	106
10.3. Defects of the present method of analysis	107
10.4. Acknowledgments	107
REFERENCES	107
