# The Use of IoT

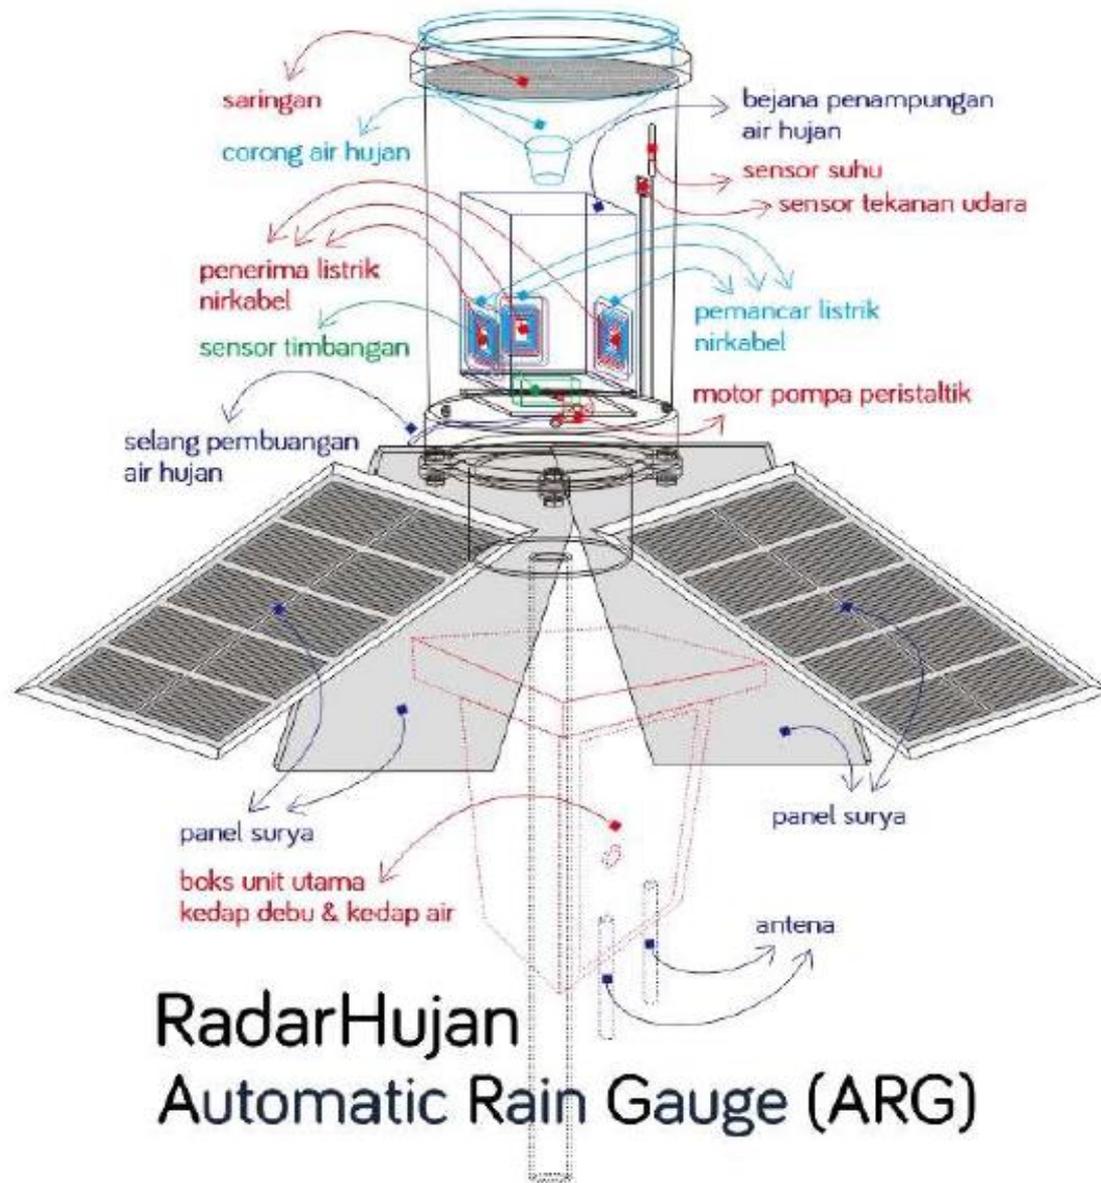

# IoT for Climate Change

- It's hoped that the substitution of the common rain stations can generate more advantages included network, cost, and the simplicity of operation and accuracy data.
- This instruments will help observer who have not specific education in meteorology or climatology

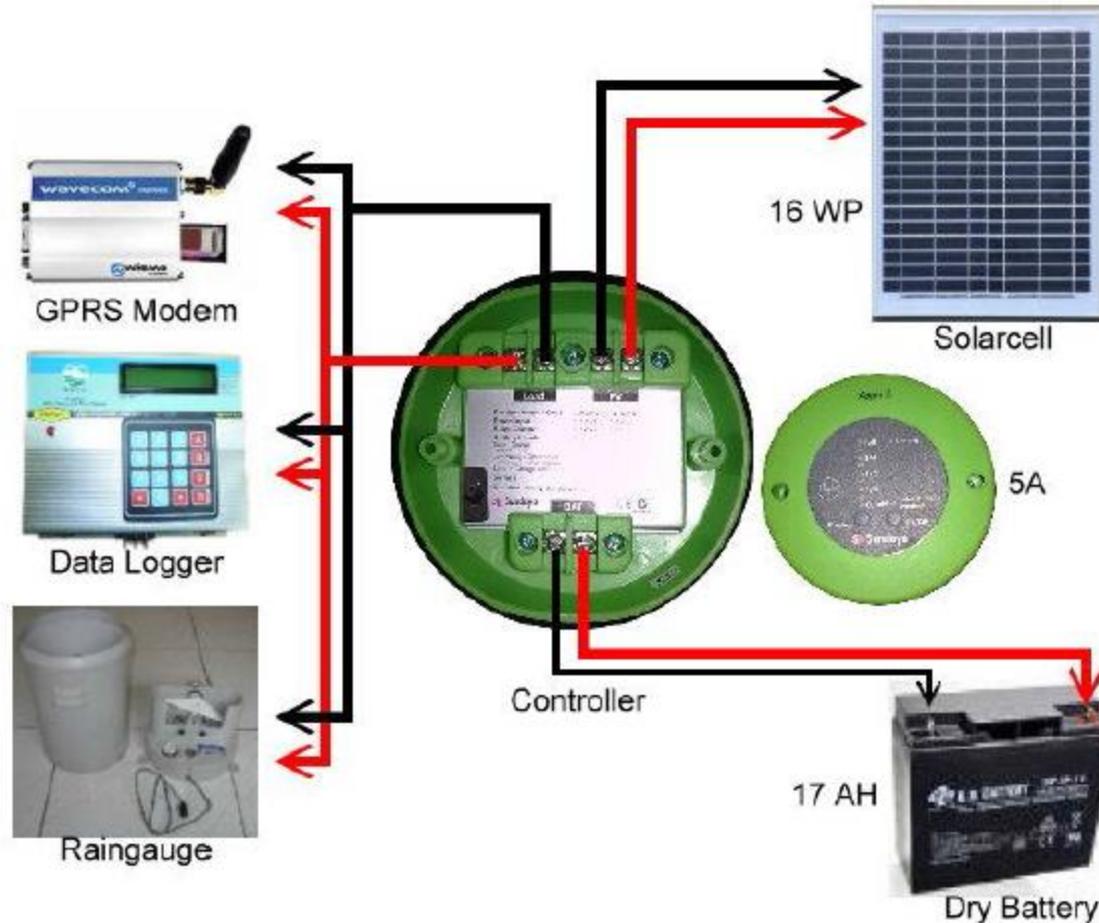

## **The aim of research project**

To develop a rain gauge device that can provide information on rainfall and rainfall prediction

# The Main Functions Performed by the Data Logger of ARG Tools

- As the system of acquisition of rainfall measurements.
- As a data storage of rainfall that is stored in system storage and analyzed in Big Data system.
- Set the delivery of data through RS232 to PC or via GPRS to the Web-Server and PCServer

**Thank You**
