

JOURNAL  
OF THE  
COMMUNICATIONS RESEARCH LABORATORY

JULY 1988

CONTENTS

Upon Change of Organization Name . . . . .	<i>By J. Suzuki</i>	
I. A Feasibility Study of Rain Radar for the Tropical Rainfall Measuring Mission		
1. Introduction . . . . .	<i>By K. Okamoto</i>	109
2. Determination of Basic System Parameters . . . . .	<i>By J. Awaka, T. Kozu, and K. Okamoto</i>	111
3. Radar Type and Antenna . . . . .	<i>By K. Nakamura and T. Ihara</i>	135
4. A Discussion of Pulse Compression and Adaptive Scanning . . . . .	<i>By T. Ihara and K. Nakamura</i>	149
5. Effects of Surface Clutter on Rain Measurements from Satellite . . . . .	<i>By T. Manabe and T. Ihara</i>	163
6. A Case Study of Rain Radar System . . . . .	<i>By K. Okamoto, J. Awaka, and T. Kozu</i>	183
II. Experimental Personal Satellite Communications System Using Millimeter-Wave for Asia-Oceanian Region . . . . .		
	<i>By S. Isobe, Y. Arimoto, Y. Suzuki, S. Yoshimoto, M. Nishida, T. Shiomi, T. Iida, and S. Kitazume</i>	209
Short Note		
III. Suppressed-Carrier Single-Sideband with Automatic Frequency Control . . . . .		
	<i>By K. Yoshiya</i>	225
